Subject: Resolution PC1502CUP01

I have put off writing concerning the floating restrooms on the river. I personally don't know what value it will really have and the utilization that it will ~~have~~ have.

I really think it is a bad idea and as with a lot of ideas that people have. It has gone too far and the people do not know how to step it back without losing face.

If there has to be toilets near the river I suggest the following: The toilets should be on the east side near the boat docks or a special dock for the toilets. If they cannot be part of docks then maybe they should be put under the bridge on the east side or by the east shore by camera two is located on the photo.

All I can see with this proposal is another three or four employees, boat, cleaning, etc. to maintain the unit. The other way is a government contract for the servicing of the unit.

EXHIBIT V

over

If restroom facilities are needed and they have to be provided by the government - Please have them on shore where they can be properly maintained and serviced.

If the restrooms can be tied over to the private sector then make regulations that would require the private sector to be able to install them and make a profit off of them.

Please keep the portable restrooms from being installed on any ~~pile~~ structures that is not on the east side of the river.

Sincerely,

John E Clark (Trustee)
